

LensOverlay Release QA Addendum

Date: 2026-05-23

Scope: copied working source only. The original portfolio/app sources were not modified.

Executive Result

The package now contains installable QA-signed release APKs for both market flavors, not only the earlier debug demo APK.

- China release QA APK: `04\_demo/release-qa/LensOverlay-China-0.1.0-release-qa-signed.apk`
- Global release QA APK: `04\_demo/release-qa/LensOverlay-Global-0.1.0-release-qa-signed.apk`
- Signing status: `apksigner verify --verbose --print-certs` passed for both APKs.
- App metadata: `aapt dump badging` passed for both APKs through an ASCII temp path.
- Secret scan: 0 hits for `OPENAI\_API\_KEY`, `MINIMAX\_API\_KEY`, `PROXY\_SHARED\_SECRET`, `sk-\*`, `Alza\*`, and bearer-token patterns.

This is QA signing with the local Android debug keystore. It is suitable for interview/demo installation evidence, not production store distribution.

Release APK Hashes

See: `04\_demo/release-qa/release\_apk\_sha256\_20260523.csv`

- China SHA-256: `D5D8DBD5EAA7A575C55EF1DDDD651AFE3D7CD9872591959F41AE0E40C9651BD6`
- Global SHA-256: `90EEBB2F0FB5E0D4DAFE6FBAED160C3D747AFFE6B154E56A5934B6F4A85BE181`

Build Verification

Command run from copied source:

```
$env:JAVA_HOME='C:\Program Files\Eclipse Adoptium\jdk-17.0.16.8-hotspot'
$env:GRADLE_OPTS='-Djavax.net.ssl.trustStoreType=WINDOWS-ROOT'
.\gradlew.bat :app:testChinaReleaseUnitTest :app:testGlobalReleaseUnitTest :app:assembleChinaRelease
:app:assembleGlobalRelease --no-daemon
```

Result: `BUILD SUCCESSFUL`.

Evidence:

- `03\_evidence/release\_qa/gradle\_release\_build\_20260523.log`
- `03\_evidence/release\_qa/china\_apksigner\_verify\_20260523.log`
- `03\_evidence/release\_qa/global\_apksigner\_verify\_20260523.log`
- `03\_evidence/release\_qa/china\_aapt\_badging\_20260523.log`
- `03\_evidence/release\_qa/global\_aapt\_badging\_20260523.log`
- `05\_evidence/apk\_secret\_scan\_20260523.txt`

Emulator QA

Device: `Medium\_Phone\_API\_35`, `emulator-5554`, API 35.

Package tested: `com.lensoverlay.translate.china`, version `0.1.0-china`.

Passed flows:

- Install and launch: PASS. `MainActivity` focused with no high-severity crash hits.

- Home UI smoke: PASS. Screenshot: `05\_evidence/screenshots/release-qa/01\_launch\_home.png`.
- Camera entry: PASS. Camera preview rendered. Screenshot: `05\_evidence/screenshots/release-qa/02\_camera\_entry.png`.
- Camera capture/OCR: PASS. The emulator scene had no Chinese text, so result count was 0; no crash or permission failure. Screenshot: `05\_evidence/screenshots/release-qa/03\_camera\_capture\_result.png`.
- Screen translate setup: PASS. Overlay app-op allowed and privacy mode visible/on. Screenshot: `05\_evidence/screenshots/release-qa/06\_screen\_translate\_after\_consent.png`.
- MediaProjection consent: PASS. System consent dialog appeared for LensOverlay China. Screenshot: `05\_evidence/screenshots/release-qa/05\_screen\_translate\_projection\_dialog.png`.
- Screen translate capture: PASS. Floating button triggered screen capture, OCR, translation, and result sheet. Screenshot: `05\_evidence/screenshots/release-qa/08\_screen\_translate\_result.png`.
- Screen translate stop: PASS. Session stopped, virtual display removed, floating bubble stopped. Screenshot: `05\_evidence/screenshots/release-qa/10\_screen\_translate\_after\_stop\_2.png`.

Release privacy check:

- After camera capture and screen capture, `/sdcard/Android/data/com.lensoverlay.translate.china/files` had no app-created image files.
- Log signal showed `sourceImageSaved=false` during screen translate release execution.

Remaining Blockers

- Physical Android phone QA: BLOCKED. `adb devices -l` returned no physical device.
- Real camera/OEM overlay behavior: BLOCKED until a physical device is connected.
- China network/provider latency: BLOCKED for a new paid live run because local `MINIMAX\_API\_KEY`, `MINIMAX\_BASE\_URL`, `PROXY\_SHARED\_SECRET`, and `LENS\_SERVER\_TRANSLATION\_BASE\_URL` are not configured in this environment.

Honest Enterprise Positioning

This package can be described as a release-build QA demo with emulator-verified install, launch, camera, MediaProjection, overlay, stop-cleanup, signing, metadata, and secret-scan evidence.

It should not be described as production-store ready until production signing, physical-device QA, crash/performance telemetry, proxy abuse protection, and region-network latency evidence are completed.
